

New study reveals issues with Trinidad & Tobago's anti-money laundering 'effectiveness' ratings

New research finds global assessment criteria fail properly to evaluate the effectiveness of anti-money laundering regimes.

The findings call into question the 2016 evaluation of Trinidad and Tobago's AML/CFT regime, awarded lowly 'moderate' ratings in six of eleven areas assessed for effectiveness, and the lowest possible scores for the other five 'effectiveness' measures.

New criteria seek to assess effectiveness

The Paris-based Financial Action Task Force introduced a new 'effectiveness' methodology in 2013 because compliance with FATF's "40 recommendations" (previously the sole focus of evaluations since 1990) gave no assurance that money laundering regulations were effective.

An extensive process demanding significant resources and preparation, evaluations now assess countries' anti-money laundering regimes based on two sets of rules: technical compliance with FATF's 40 recommendations, and 'effectiveness' based on 11 new 'outcome' measures. But, do they work?

Measuring effort, not outcomes

According to the study's author, Dr Ron Pol, "misapplication of *outcome* labels for what are, in reality, simplistic *output* and *activity* measures miss an opportunity to evaluate the real impact of anti-money laundering rules."

He says that FATF's new methodology doesn't evaluate outcomes in the sense generally understood as the effect or impact of regulations.

"More meaningful outcome measures, for example, might include the extent to which the system better allows authorities to reduce and prevent crime, and to cut the social and economic harms caused by serious crime like drugs-, arms- and human-trafficking, corruption, fraud and tax evasion."

"Some of those measures are difficult to evaluate" concedes Pol, "but assessing countries' anti-money laundering regimes by superficial 'easy-to-measure' metrics suggests that the intensive rating exercise conveys value more as a rhetorical device than any real measure of effectiveness."

"That is because the current measures largely reflect the efforts of regulatory and enforcement authorities, not whether those efforts have any meaningful effect or impact on serious crime."

'Tick-box' compliance extended

"Moreover", adds Pol, "assessors often use the same evidence to assess both the old and new criteria. But, compressing FATF's 40 recommendations into an abbreviated yet broadly equivalent list of so-called 'outcomes' adds little new evaluative capability beyond 11 more boxes to tick."

"The nature of any 'tick-box' system means that it's possible for jurisdictions to get high ratings without much impact on crime, and vice versa" says Pol. "To their credit, authorities often appear to focus more on crime prevention than better ratings, although close examination of more than 50 evaluations to date reveal ways to achieve both. Nonetheless, although the new ratings system arguably lacks much meaning, low scores have a very real impact on any jurisdiction's access to financial markets."

Effectiveness gap evidence mounting

Another recent academic paper also notes "enormous" industry frustration that, despite nearly 30 years of money laundering obligations (now imposed on millions of firms in nearly 200 countries) the "huge and growing cost of compliance has been accompanied by little observable effect".

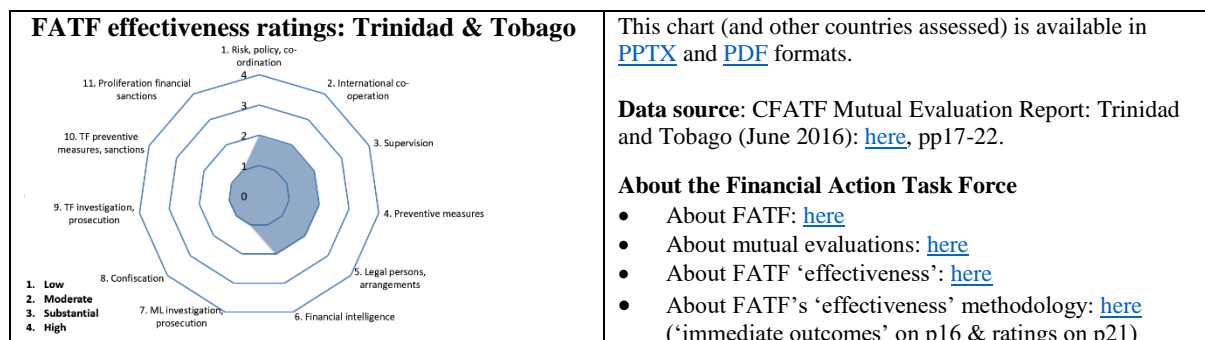

Professors Levi, Reuter and Halliday say that the modern anti-money laundering system is "highly cost-inefficient" and has failed "to produce credible evidence of [its] effectiveness."

The new study's detailed analysis makes similar findings. It concludes that FATF's new 'effectiveness' methodology offers few reliable indicators about the effectiveness of money laundering controls.

Positive signs

But the new study ends optimistically. "FATF's frank acknowledgement that evaluating for effectiveness was missing, and important, is a positive step", says Pol. "Likewise, that outcomes matter. FATF also frequently adjusts its standards and guidance as circumstances change. If it accepts that some principles and practices underpinning its effectiveness framework might be improved, that tradition might reasonably be expected to continue."

Additional notes

Supplementary material: Trinidad & Tobago

The new study used ‘immediate outcome 7’ (money laundering investigations and prosecutions) to illustrate differences between *outputs* and *outcomes*, and why it matters.

Although Trinidad and Tobago authorities have initiated some money laundering investigations, assessors noted the “limited” number of cases before the courts, particularly considering the “large number” of predicate offences which produce crime proceeds, such as drugs trafficking, fraud and robberies. The assessors also regarded Trinidad and Tobago authorities’ prioritisation of capital offenses and other cases as “barriers to successful investigation and prosecution” of money laundering cases.

These factors were said to indicate a low level of effectiveness; and assessors awarded Trinidad and Tobago the lowest possible score.

More money laundering prosecutions would clearly help boost the country’s ‘effectiveness’ rating.

“But,” says Pol, “more money laundering prosecutions (an *activity* or *output* measure) might, or might not, help achieve the (crime prevention) *outcomes* that authorities seek.”

He gave a hypothetical example where enforcement agencies detect and prosecute twice as much serious crime but, with prosecutors overwhelmed, and consistent with police focus on the underlying crime, no money laundering charges are laid.

Authorities would of course promote their doubling of crime detection to positively influence ratings, but with no money laundering cases, Trinidad and Tobago’s FATF ‘effectiveness’ score on this measure might remain low.

“Bizarrely”, says Pol “the prospect of the lowest possible rating if authorities disrupt significantly *more* serious crime is an unintended consequence of focusing on simple output measures rather than crime prevention outcomes. Presumably, that would not be the intention of authorities, or FATF.”
